*The purpose of this survey is to identify certain equipment and/or connections that you may have in your home or condo that could have an adverse effect on our water supply and could create a hazardous condition within your home. Based upon your survey responses, you may be asked to install one or more backflow prevention assemblies on your property and have these assemblies tested on an annual basis. All costs associated with the installation and testing of these assemblies are the sole responsibility of the property owner. California law requires that potentially hazardous services are protected with a backflow prevention assembly.*

**Fire Sprinkler Requirement – Compliance**

Current Fire Codes require the installation of a fire sprinkler system for all new residences. Fire sprinkler systems are required for certain existing residences when additional square footage is constructed and certain criteria are met. For more information regarding residential or commercial requirements, contact your local Fire Protection District.

- Exempt – This project consists of exterior or site improvements only or interior improvements with no additional square footage.
- Exempt – This project includes additional square footage, but is exempt because the addition is under the square footage thresholds.
- Exempt – This project consists of constructing an **ADU** as defined in **CA SB 13** which states that fire sprinklers shall not be required if they are not required for the primary residence.

**If any of the conditions below apply, you must complete the “Water Service with Fire Sprinkler System – FORM F” and attain signed approval from the local Fire Protection District, prior to submitting plans to the TCPUD.**

- Fire Sprinkler System Required – A fire sprinkler system will be installed. Upgrade of the existing water service/s is required.
- Fire Sprinkler System Required – A fire sprinkler system will be installed utilizing an on-site storage tank and pump. Upgrade of the existing water service/s is not required.
- Fire Sprinkler System Required – A fire sprinkler system will be installed. Upgrade of the existing water service/s is not required. The existing water service is sufficient to handle the new fire sprinkler system.
- Fire Sprinkler System Required – This property has an existing fire sprinkler system which will be expanded for the new additional square footage. Upgrade of the existing water service/s is not required.

If you are unfamiliar with any of the District specifications regarding water and sewer installation, please contact the Technical Services Department at 530-580-6281. You may pick up a set of specifications at the District office.
